1. GENERAL DESCRIPTION

1.1 OVERVIEW

G170ECE-LE1 is a 17.0" TFT Liquid Crystal Display IAV module with LED Backlight units and 30 pins LVDS interface. This module supports 1280 X 1024 SXGA mode and can display 16.7M colors.

The PSWG is to establish a set of displays with standard mechanical dimensions and select electrical interface requirements for an industry standard 17.0" SXGA LCD panel and the LED driving device for Backlight is not built in PCBA.

1.2 FEATURE

- SXGA (1280 x 1024 pixels) resolution
- DE (Data Enable) only mode
- LVDS Interface with 2pixel/clock
- PSWG (Panel Standardization Working Group)
- RoHS compliance

1.3 APPLICATION

- -TFT LCD Monitor
- Factory Application

1.4 GENERAL SPECIFICATIONS

3.2 BACKLIGHT UNIT

Parameter	Symbol		Value		Unit	Note
Farameter	Symbol	Min. Typ.		Max.	Unit	Note
LED Light Bar Input Voltage Per Input Pin	VPIN	42.5	47.3	56	V	(1), Duty=100%, IPIN=29mA
LED Light Bar Current Per Input Pin	IPIN	26.1	29	31.9	mA	(1), (2) Duty=100%
LED Life Time	LLED	50000	-	-	Hrs	(3)
Power Consumption (Output power)	PBL	5.0	5.5	7.1	W	(1) Duty=100%, IPIN=29mA

Note (1) LED light bar input voltage and current are measured by utilizing a true RMS multi-meter as shown below:

Note (2) PBL = IPIN × VPIN × input pins

Note (3) The lifetime of LED is defined as the time when LED packages continue to operate under the conditions at Ta = 25 ±2 $^{\circ}$ C and I= 29 mA (per chip) until the brightness becomes \leq 50% of its original value.

Note (4) The module must be operated with constant driving current.

6. INTERFACE TIMING

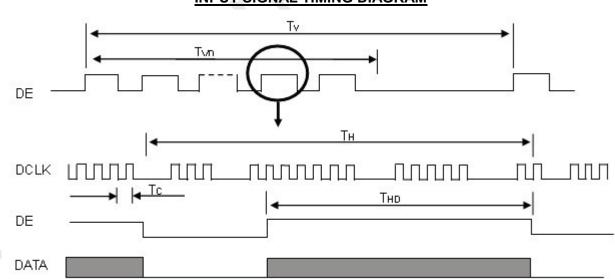

6.1 INPUT SIGNAL TIMING SPECIFICATIONS

The input signal timing specifications are shown as the following table and timing diagram.

Signal	Item	Symbol	Min.	Тур.	Max.	Unit	Note
	Frequency	Fc	45	54	69.3	MHz	-
	Period	Тс	14.43	18.52	22.22	ns	-
	Input cycle to cycle jitter	T _{rcl}	-0.02*TC		0.02*TC	ns	(3)
LVDS Clock	Input Clock to data skew	TLVCCS	-0.02*TC		0.02*TC	ns	(4)
	Spread spectrum modulation range	Fclkin_mod	0.97*FC		1.03*FC	MHz	(5)
	Spread spectrum modulation frequency	Fssм			100	KHz	(5)
	Frame Rate	Fr	50	60	75	Hz	-
Vertical Display	Total	Τv	1044	1066	1450	Th	$Tv=T_{vd}+T_{vb}$
Term	Active Display	T _{vd}		1024		Th	-
	Blank	T _{vb}	20	42	426	Th	-
	Total	T _h	790	844	880	Tc	$T_h = T_{hd} + T_{hb}$
Horizontal Display Term	Active Display	T _{hd}		640		Tc	-
Torini	Blank	T _{hb}	150	204	240	Tc	-

Note (1) Because this module is operated by DE only mode, Hsync and Vsync input signals should be set to low logic level or ground. Otherwise, this module would operate abnormally.

Note (2) The Tv(Tvd+Tvb) must be integer, otherwise, the module would operate abnormally.

Т7	10	-	100	ms
Т8	10	-	_	ms
Т9	10	_	_	ms
T10	20	_	50	ms

Note:

(1) The supply voltage of the external system for the module input should be the same as the definition of Vcc.

(2) When the backlight turns on before the LCD operation of the LCD turns off, the display may momentarily become abnormal screen.

(3) In case of VCC = off level, please keep the level of input signals on the low or keep a high impedance.

(4) T4 should be measured after the module has been fully discharged between power off and on period.

(5) Interface signal shall not be kept at high impedance when the power is on.

(6) INX won't take any responsibility for the products which are damaged by the customers not following the Power Sequence.

(7) There might be slight electronic noise when LCD is turned off (even backlight unit is also off). To avoid this symptom, we suggest "Vcc falling timing" to follow "T7 spec".

INNOLUX

PRODUCT SPECIFICATION

群創光電 Note (1)Definition of Viewing Angle (θx, θy):

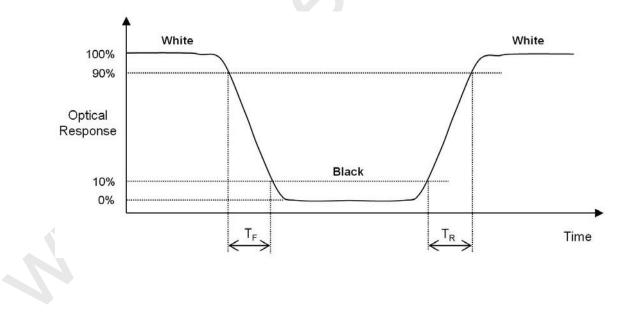

Note (2)Definition of Contrast Ratio (CR):

The contrast ratio can be calculated by the following expression at center point.

Contrast Ratio (CR) = White / Black

Note (3)Definition of Response Time (T_R , T_F):

Version	1.	0
---------	----	---

17 August 2023

21 / 40

www.panelook.com

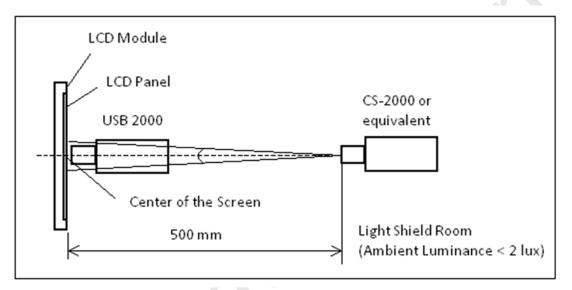

Note (4) Definition of Luminance of White (Lc):

Measure the luminance of White at center point.

Note (5) Measurement Setup:

The LCD module should be stabilized at given temperature to avoid abrupt temperature change during measuring. In order to stabilize the luminance, the measurement should be executed after lighting Backlight for 40 minutes in a windless room. The measurement placement of module should be in accordance with module drawing.

Note (6) Definition of White Variation (δW):

Measure the luminance of White at 9 points.

Luminance of White : L(X), where X is from 1 to 9.

 $\delta W = \frac{\text{Minimum [L(1) to L(9)]}}{\text{Maximum [L(1) to L(9)]}} \times 100\%$

8. RELIABILITY TEST CRITERIA

Test Item	Test Condition	Note
High Temperature Storage Test	$60^\circ\!\mathrm{C}$, 240 hours	
Low Temperature Storage Test	-20°C , 240 hours	
Thermal Shock Storage Test	-20°C, 0.5 hour \longleftrightarrow 60°C, 0.5 hour; 100cycles, 1 hour/cycle)	(1) (2)
High Temperature Operation Test	$60^\circ C$, 240 hours	(1),(2) (4),(5)
Low Temperature Operation Test	0°C , 240 hours	
High Temperature & High Humidity Operation Test	50℃, RH 80%, 240 hours	
ESD Test (Operation)	150pF, 330Ω , 1 sec/cycle Condition 1 : panel contact, ±8 KV Condition 2 : panel non-contact ±15 KV	(1), (4)
Shock (Non-Operating)	50G, 11ms, half sine wave, 1 time for $\pm X$, $\pm Y$, $\pm Z$ direction	
Vibration (Non-Operating)	1.5G, 10 ~ 300 Hz sine wave, 10 min/cycle, 1 cycles each X, Y, Z direction	(2), (3)

Note (1)There should be no condensation on the surface of panel during test,

Note (2) Temperature of panel display surface area should be 60°C Max.

- Note (3) At testing Vibration and Shock, the fixture in holding the module has to be hard and rigid enough so that the module would not be twisted or bent by the fixture.
- Note (4) In the standard conditions, there is no function failure issue occurred. All the cosmetic specification is judged before reliability test.
- Note (5) Before cosmetic and function test, the product must have enough recovery time, at least 24 hours at room temperature.

9. PACKAGING

9.1 PACKING SPECIFICATIONS

- (1) 11 LCD modules / 1 Box
- (2) Box dimensions:475(L)x390(W)x410(H)mm
- (3) Weight: approximately: 16.25kg (11 modules per box)

9.2 PACKING METHOD

10. DEFINITION OF LABELS

10.1 INX MODULE LABEL

The barcode nameplate is pasted on each module as illustration, and its definitions are as following explanation.

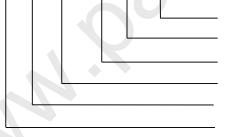

Note (1) Safety Compliance (UL logo) will open after C1 version.

(a)Model Name: G170ECE-LE1

(b)*	*	*	*	:	Factory	ID
------	---	---	---	---	---------	----

(c)Serial ID: X X X X X X X Y M D X N N N N

Serial INX Internal Use Year, Month, Date INX Internal Use Revision INX Internal Use

Serial ID includes the information as below:

(a) Manufactured Date: Year: 1~9, for 2021~2029

Month: 1~9, A~C, for Jan. ~ Dec.

Day: 1~9, A~Y, for 1st to 31st, exclude I, O and U

- (b) Revision Code: cover all the change
- (c) Serial No.: Manufacturing sequence of product

11. PRECAUTIONS

11.1 ASSEMBLY AND HANDLING PRECAUTIONS

- (1) The module should be assembled into the system firmly by using every mounting hole. Be careful not to twist or bend the module.
- (2) While assembling or installing modules, it can only be in the clean area. The dust and oil may cause electrical short or damage the polarizer.
- (3) Use fingerstalls or soft gloves in order to keep display clean during the incoming inspection and assembly process.
- (4) Do not press or scratch the surface harder than a HB pencil lead on the panel because the polarizer is very soft and easily scratched.
- (5) If the surface of the polarizer is dirty, please clean it by some absorbent cotton or soft cloth. Do not use Ketone type materials (ex. Acetone), Ethyl alcohol, Toluene, Ethyl acid or Methyl chloride. It might permanently damage the polarizer due to chemical reaction.
- (6) Wipe off water droplets or oil immediately. Staining and discoloration may occur if they left on panel for a long time.
- (7) If the liquid crystal material leaks from the panel, it should be kept away from the eyes or mouth. In case of contacting with hands, legs or clothes, it must be washed away thoroughly with soap.
- (8) Protect the module from static electricity, it may cause damage to the C-MOS Gate Array IC.
- (9) Do not disassemble the module.
- (10) Do not pull or fold the lamp wire.
- (11) Pins of I/F connector should not be touched directly with bare hands.

11.2 STORAGE PRECAUTIONS

(1) When storing for a long time, the following precautions are necessary.

- (a) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5°C and 30°C at humidity 50+-10%RH.
- (b) The polarizer surface should not come in contact with any other object.
- (c) It is recommended that they be stored in the container in which they were shipped.
- (d) Storage condition is guaranteed under packing conditions.
- (e)The phase transition of Liquid Crystal in the condition of the low or high storage temperature will be recovered when the LCD module returns to the normal condition
- (2)High temperature or humidity may reduce the performance of module. Please store LCD module within the specified storage conditions.
- (3)It is dangerous that moisture come into or contacted the LCD module, because the moisture may damage LCD module when it is operating.
- (4)It may reduce the display quality if the ambient temperature is lower than 10 °C. For example, the response time will become slowly, and the starting voltage of lamp will be higher than the room temperature.

NNOLUX 群創光電 11.3 OTHER PRECAUTIONS

- (1) Normal operating condition
 - (a) Display pattern: dynamic pattern (Real display)
 - (Note) Long-term static display can cause image sticking.
- (2) Operating usages to protect against image sticking due to long-term static display
 - (a) Static information display recommended to use with moving image.
- (3) Abnormal condition just means conditions except normal condition.
